

# European regional labor force composition 2016

Ternary balance scheme centered on triangle centroid

Deviations from a perfectly balanced labor force composition (33% primary, 33% secondary, 33% tertiary). Regions with equal share in all sectors would be shaded grey. Regions with all workers in a single sector would be shaded in pure green, blue or pink.

Ternary balance scheme centered on average composition

Deviations in labor force composition from the average European region (4% primary, 24% secondary, 72% tertiary) in 2016. While hue shows the direction of deviation, chroma and lightness show the magnitude.
